Rosedale, NY 11422

I am writing in response to your Creator Tools Engineering Internship posted on the Stony Brook Handshake. I have experience building websites, and I'm currently working towards a Web Development certification.

After graduating from High School, I started attending Queensborough Community College. While I was there I made it my mission to become an exceptional leader. The first step I took towards this goal was becoming President of the Gaming Club on campus. As President, I helped make the club more active on campus by hosting gaming tournaments with different clubs. Doing this got our club more students, which in return earned our club more money. My second step towards my goal was serving as Student Government President. During my term, my Student Government board and I created an operations manual with the purpose of training future Student Government boards so that they could be better prepared when coming in. We also advocated for the expansion of the library on campus, which was done during the second half of our term.

While at Queensborough I had the opportunity to get involved with a mentorship program, and I was also able to travel to Austria to participate in a global citizenship program. After my first year at Queensborough I became a mentor for the MALES Program (Men Achieving and Leading in Excellence and Success). My job was to be someone my mentees could speak to about anything, and to also guide them in school. The Global Citizenship program was one of the most illuminating experiences of my life. I sat in seminars where we discussed why the world is how it is now, and how we as individuals can make a difference. We ended the seminar by receiving a Global Citizenship certificate.

During my past year studying at Stony Brook University I have gained many technical skills that I did not possess before. I took a couple of Computer Science classes and learned how to code in Java. I also took the initiative and taught myself how to develop websites by using online resources. I taught myself HTML, CSS, and JavaScript. I also learned how to use Bootstrap to create websites more efficiently. After learning how to make websites, I created a personal webpage for myself.

You can get in touch with me by email, or phone call.
I look forward to having the opportunity to further discuss my qualifications with you.

Sincerely,

Patrick Boucicault
